SmartPAC PRO Communicates

The SmartPAC PRO has more built-in and optional communication and networking features than any other control. Find out how to put them to work for you.

Talk To The Servo Feed: Why program in two places? Set up your feed parameters on the SmartPAC PRO and then send them down to the feed controller when a tool is loaded.

Get The Picture: SmartView is included with every SmartPAC PRO and allows you to view pressroom status from any web enabled device.

Spread The Word: Send text messages from the machine to cell phones or tablets to summon personnel when assistance is needed. Get help for maintenance, QC, raw material, etc.

Paperless Shop: With the Info Center option you can retrieve setup instructions, part drawings, photos, and videos from a central location on your network.

Save Critical Tool Data: Back up all programmed tool information over the network. Should you lose info on the SmartPAC PRO it can be restored at any time.

Remote Access: You can view and run your SmartPAC PRO remotely over your network from any Windows PC.

IIOT Ready: ShopFloorConnect is a complete efficiency tracking system for monitoring uptime, downtime, reasons for downtime, and OEE. Works great on presses and any other machine in your shop.
WINTRISS®

"WE DON'T NEED ANOTHER SCREEN"

Nobody wants to have multiple HMI screens on their press. Wintriss has addressed this issue by developing an optional feature for the SmartPAC PRO that enables it to host 3rd party HMIs created in the Wonderware Development Environment. Common applications for this capability include die clamping, moving bolster control, lube system and bearing temperature monitoring, and pick-and-place robotics.

Wonderware features hundreds of drivers for PLCs, drives, and other automation controllers, so whether you do it yourself, hire a contractor, or work with Wintriss, SmartPAC PRO can be the last screen your press will ever need.

DON'T NEED WONDERWARE? HOW ABOUT A PLC INTERFACE?

We've got you covered regardless of the size of your automation or integration project. The SmartPAC PRO's PLC interface stores and shares press parameters, MODBUS tags, and status messages with your PLC.
